

Classroom

NECI's Signature Seminar Features

Each course is classroom based and delivered workshop-style to encourage maximum interaction and participation.

Signature Seminars are flexible providing coverage of a wide range of topics within a timeframe that suits your organization.

A senior instructor will consult with your organization in advance to understand the key issues and focus areas for your group, incorporating these into customized exercises and activities to practice key learning outcomes.

An evaluation report is provided to the course organizer showing the participant ratings and feedback – a great way to confirm the value received through the training session.

Evaluating Procedural Fairness in Procurement

Course Description

Suppliers dedicate considerable effort and resources responding to a procurement process. They expect to be treated equally and policies and procedures to be carried out objectively. If suppliers feel they have been treated unfairly, they may challenge the validity of your process, which can cost your organization time and money and severely damage your reputation in the supplier community.

In this interactive one-day course, you will explore fairness issues that commonly arise during procurement processes. Using real-life examples, you will practice evaluating whether procedural unfairness occurred and form recommendations to reduce the risk of fairness challenges in future.

Learning Objectives

- Recognize common fairness issues that arise during procurement processes.
- Practice identifying procedural unfairness in procurement processes.
- Determine what recommendations for policy and procedural changes might be relevant in various situations where fairness is an issue.

Helping organizations in Canada obtain maximum value from procurement and contracting
